# Homework 4.4 Question

In this problem you will analyze a profile log taken from a different mongoDB instance and you will import it into a collection named sysprofile. To start, please download sysprofile.json from Download Handout link and import it with the following command:

```
mongoimport --drop -d m101 -c sysprofile sysprofile.json
```

Now query the profile data, looking for all queries to the *students* collection in the database *school2*, sorted in order of decreasing latency. What is the latency of the longest running operation to the collection, in milliseconds?

Choose the best answer:
   a.  19776550
   b.  10000000
   c.  5580001
   d.  15820
   e.  2350
